RE: Subsurface investigation of petroleum contamination at the Chester Town Garage
(Site #91-1105)

Dear Mr. Hammond:

The Sites Management Section (SMS) has received the Summary Report of the Subsurface Investigation performed by TRI-S Environmental Consulting, Inc. (TEC) at the above referenced site.

Due to the fact that the monitoring well located closest to the former underground storage tank area could not be sampled because of a low water level, the SMS requests that an additional sampling round be conducted in the spring. All four wells should be sampled by a qualified consultant and analyzed by EPA Method 8020. If the results of the sampling are again non-detect, the SMS will not require any additional work, and will begin the closure process for this site. Please submit the sampling results as soon as possible.

The SMS appreciates your cooperation at this site, and can be reached by phone with any questions which you may have.

Sincerely,

Charles B. Schwer, Supervisor
Sites Management Section
